Welcome to your blog

Details

Written by Joomla

This is a sample blog posting.

If you log in to the site (the Author Login link is on the very bottom of this page) you will be able to edit it and all of the other existing articles. You will also be able to create a new article and make other changes to the site.

As you add and modify articles you will see how your site changes and also how you can customise it in various ways.

Go ahead, you can't break it.

Joomla! is all about allowing you to create a site that matches your vision. The possibilities are limitless; this sample site will get you started.

There are a few things you should know to get you started.

Every Joomla! Web site has two parts: the Site (which is what your site visitors see) and the Administrator (which is where you will do a lot of the site management). You need to log in to the Administrator separately with the same username and password. There is a link to the administrator on the top menu that you will see when you log in.

You can edit articles in the Site by clicking on the edit icon. You can create a new article by clicking on the Create Article link in the top menu.

To do basic changes to the appearance your site click Home, Site Settings and Home, Template Settings.

To do more advanced things, like edit the contact form, manage users, or install a new template or extension, login to the Administrator.

Side Module

This is a module where you might want to add some more information or an image, a link to your social media presence, or whatever makes sense for your site.

You can edit this module in the module manager. Look for the Side Module.

Getting Started

[Joomla](#)

It's easy to get started creating your website. Knowing some of the basics will help.

What is a Content Management System?

A content management system is software that allows you to create and manage webpages easily by separating the creation of your content from the mechanics required to present it on the web.

In this site, the content is stored in a *database*. The look and feel are created by a *template*. Joomla! brings together the template and your content to create web pages.

Logging in

To login to your site use the user name and password that were created as part of the installation process. Once logged-in you will be able to create and edit articles and modify some settings.

Creating an article

Once you are logged-in, a new menu will be visible. To create a new article, click on the "Submit Article" link on that menu.

Joomla!

Congratulations! You have a Joomla site! Joomla makes it easy to build a website just the way you want it and keep it simple to update and maintain.

Joomla is a flexible and powerful platform, whether you are building a small site for yourself or a huge site with hundreds of thousands of visitors. Joomla is open source, which means you can make it work just the way you want it to.

The content in this installation of Joomla has been designed to give you an in depth tour of Joomla's features.

Beginners

If this is your first Joomla! site or your first web site, you have come to the right place. Joomla will help you get your website up and running quickly and easily.

Start off using your site by logging in using the administrator account you created when you installed Joomla.

[➤ Read more: Beginners](#)

Upgraders

If you are an experienced Joomla! user, this Joomla site will seem very familiar but also very different. The biggest change is the new administrator interface and the adoption of responsive design. Hundreds of other improvements have been made.

Professionals

Joomla! 3 continues development of the Joomla Platform and CMS as a powerful and flexible way to bring your vision of the web to reality. With the new administrator interface and adoption of Twitter Bootstrap, the ability to control its look and the management of extensions is now complete.

Joomla! Testing

[Red](#)
[Yellow](#)
[Green](#)
[Lime](#)

Thanks for helping us to test Joomla!

We're getting ready for the release of Joomla and we appreciate you helping us find and fix problems as we work.

If you haven't done testing before here are some tips.

- Don't delete the installation folder when you finish installing! While we're working we turn that security feature off to make it easier to test.
- Go to global configuration and set Error Reporting to Development (that's on the server tab) and enable both debugging and language debugging (those are on the system tab). Don't worry when you see ** around words --that means Joomla translation is doing its job.

How to test

- First, do the things you normally do and see if you spot any problems.
- Look at all of the front end views and record any problems
- Look at all the back end views and report any problems
- See more ideas below

What to look for

- Any error messages that say things like Fatal Error or Strict or similar things that indicate that something is not working correctly.
- Untranslated strings. You will know these because they look like this: ?STRING_HERE?
- Problems of rendering--items not aligned correctly, missing or wrong images, pages that just don't look right.
- Unexpected behavior--anything that is working differently than it did in 2.5.
